Match grid

Each cell is one photo compared to one enrolled device. Color shows Contradicts, Unclear, or Supports for that pairing.

Query ↓ / Device →	Cannon 60D	Sony A57	Nikon D90	Macbook	Nikon d7000
IMG_0462.JPG	0.0014	0.0007	-0.0013	-0.0018	-0.0024

Contradicts Unclear Supports (darker = stronger)

Each uploaded photo is compared to devices you enrolled earlier. Use the grid and Summary table for the result. Higher scores mean a closer camera match – not a percent chance, and not whether the picture content matches.

Summary

Query	Best device	Match score	Band	Gap to runner-up
IMG_0462.JPG	Cannon 60D	0.0014	Contradicts device match	0.0007

IMG_0462.JPG

Marker	Device	Match score	Zone
▲	Cannon 60D best	0.0014	Contradicts
●	Sony A57	0.0007	Contradicts
●	Nikon D90	-0.0013	Contradicts
●	Macbook	-0.0018	Contradicts
●	Nikon d7000	-0.0024	Contradicts

Three zones: Contradicts (left), Unclear (middle), Supports (right). Markers show match scores; ▲ = best match for this query.

Verify summary

Query images	1
Usable fingerprint match scores	1
Enrolled devices compared	5

Decision cutoffs for the sensor fingerprint match score (NCC): below 0.0060 → Contradicts a device match; 0.0060–0.0062 → Unclear; at or above 0.0062 → Supports a device match.

This report tests whether each query image is consistent with a device fingerprint previously enrolled in this gallery, under the capture and format rules for those enrollments. It is not a determination that an image is genuine, and it is not proof of fraud or authenticity.

How similar are these photos?

Each dot is a photo. Points close together have more similar camera fingerprints. Use the match grid and Summary for the official answer; this map is only a visual guide.

■ Enrolled devices · ▲ Photos you are checking (Q1, Q2, ...).

Distance between dots matters; the exact left/right or up/down position does not.

- Cannon 60D
- Macbook
- Nikon D90
- Nikon d7000
- Sony A57
- ▲ Query images

Colored squares = enrolled devices. Triangles = the photos you are checking (Q1, Q2, ...). Enroll references were subsampled for display.

This report tests whether each query image is consistent with a device fingerprint previously enrolled in this gallery, under the capture and format rules for those enrollments. It is not a determination that an image is genuine, and it is not proof of fraud or authenticity.

EU note: enrolled photos are processed to build a device fingerprint and are not kept. The fused device fingerprint, optional per-enroll-image sensor fingerprints used for layout charts, and summary metadata are stored until you delete the device. Photos for background jobs are kept until the job finishes; if enrollment is refused they may be held up to 30 minutes for an explicit override.
